Experience and Certifications

- **OneCFO |** Junior Developer Consultant **|** Eastwood, Quezon City **2025-2026**

  - Developed and enhanced an automated web scraping system, transforming a semi-automated workflow from concurrent computing to parallel computing, increasing processing capacity from 1,800 documents per week to 800 per day, while handling data extraction, cleaning, and ETL for machine learning use.
  - Implemented anti-bot detection and analytics bypass mechanisms, including browser fingerprint evasion and anonymous browsing measures, significantly improving scraper reliability and reducing detection risk.
  - Assisted in frontend and backend web development using Laravel, providing support as needed across various projects
  - Conducted manual unit testing, helping identify bugs early and improve overall system stability and reliability across company projects.

- **CCNA: Introduction to Networks,** *Cisco* ***2024***
- **Introduction to IoT,** *Cisco* ***2025***

Projects

PyCeal and BSU Marketplace| ***Flask, HTML/CSS, MySQL, SQLAlchemy***

- Led and managed the development team of PyCeal, a secure ID generator using Flask and SQLite, integrating steganography to enhance data security.
- Created and optimized the steganography algorithm and decoder, designing them to securely encode sensitive information into images and efficiently decode it when required.
- Configured and developed all backend functionalities of the app using Flask, handling server-side logic and database integration, ensuring seamless integration and smooth operation of the application.
- Built the backend structure of the application, including the core CRUD functionalities, ensuring efficient data handling, scalability, and seamless integration with the frontend.
- Designed and normalized the database systems, eliminating redundancy and ensuring efficient data storage and retrieval.

Edge Contracting CycleGAN for Topological Preservation| ***Python, Pytorch, Google Colab, Numpy, Pandas, Matplotlib***

- Led the research project and integrated an edge contraction–based topological loss into CycleGAN, improving topology preservation by 25–80% compared to baseline models.
- Preprocessed and prepared multiple datasets for training, improving data quality, consistency, and model readiness.
- Trained and evaluated the model against standard CycleGAN and CUT, producing stronger structural consistency in qualitative and quantitative results

NetWoink | ***C#, WPF***

- Spearheaded the development of NetWoink, a Network Management System (NMS) built using C# and WPF, making key technical decisions and coordinating team efforts throughout the project.
- Implemented the core algorithms of the application by leveraging various networking protocols, including Address Resolution Protocol (ARP) and Simple Network Management Protocol (SNMP), creating the essential features of the application.
- Created and implemented the skeletal UI framework, establishing a structured and efficient base for further development by other team members.

WattWise | ***C/C++, JavaScript, IoT***

- Planned, wired, and programmed the ESP32-based smart power meter hardware in Embedded C++ using the Arduino framework, integrating PZEM sensors for real-time voltage, current, power, and energy monitoring while implementing relay automation for remote appliance switching and load control through the web platform.
- Designed and implemented the backend API and database integration for logging, storing, and retrieving energy usage data for analytics and reporting.
- Integrated Wi-Fi networking, HTTP requests, and serial communication protocols for reliable device-to-server data exchange.

Languages, Technologies and Skills

- **Languages**: Python, C#, JavaScript, PHP, C/C++, Java
- **Technologies:** Flutter, Flask, Selenium, Playwright, Laravel .NET Core, MERN, HTML/CSS, MySQL, SQLite, Firebase, MongoDB Git, WPF, Figma
- **Technical Skills:** Automation, Database Modelling (ERD, Normalization), UML Planning, Steganography, CRUD Operations, REST APIs, Googling
- **Soft Skills:** Team Leadership, Problem Solving, Communication, Collaboration, Time Management

Education

- **B.S. Computer Science,** Batangas State University – NEU, Philippines. ***2022-2026***
  Relevant Coursework: Software Engineering, Parallel Computing, Software Engineering, Data Structures
- **Science, Technology and Engineering (STEM)**, Naga City Science High School ***2022***
